Vodafone Connectivity

Vodafone can keep you connected wherever your business takes you without compromising on security.

At home, on the move, from remote sites or travelling on business abroad, we aim to make it easy for you to access email, the internet and your company networks and stay secure.

Mobile Broadband

Mobile broadband from Vodafone represents the standard for mobile working providing connectivity on the move, security tailored to corporate IT policies, and the opportunity for high-speed access to your corporate networks and files.

Wi-Fi

Complementing mobile broadband and expanding the flexibility of working on the move, this option allows the customer to connect to Wi-Fi hotspots making it possible to work remotely from more locations.

Home Broadband

Our broadband access lets you work as effectively from home as you can from the office.

Dial-Up

Our Dial-Up connectivity continues to provide a reliable and serviceable option in situations where broadband or Wi-Fi may not be available.

Hotel Broadband

Ethernet connectivity is available in a number of hotels throughout the world.

Benefits

Work reliably and securely wherever you are

Improve productivity of remote workers

**Monitor usage** and costs with reporting tools

Solution in detail

Vodafone has years of experience in mobility, and we are uniquely placed to help businesses get the most out of a truly mobile workforce. Our solutions are designed to give your users reliable and secure access to your network when they're working away from the office. All our mobility options work through a single connectivity manager: Vodafone Secure Remote Access.

Processes

1 User launches software
2 User selects access method
3 Automatic launch of VPN
**4** Authorised network access given

Vodafone Secure Remote Access
Vodafone Secure Remote Access automatically detects authorised networks and gives your remote workers a choice of access options through a single interface.

– Allows users to connect easily

– Can help reduce calls to helpdesks

– Ensures that the PC is compliant with IT policy and the user authenticated before connection

– Monitors which local security applications are running (Anti Virus, VPN and Personal Firewall)

– Facilitates usage and cost reporting
